

Scotland Loves Nature

Calling on the Scottish Government to bring forward legislation to protect nature, Scotland Loves Nature wants a Natural Environment Bill that would commit the Scottish Government to preventing the extinction of wildlife and halting the decline of nature by 2030.

As **LINK**'s longest running partnership, Save Scottish Seas is still calling for effective measures to protect Scotland's seas and to deliver ocean recovery, where wildlife and coastal communities are flourishing and ecosystems are protected, connected and thriving.

10 years old in 2023, the award winning Nature Champions initiative is at the forefront of bringing nature into Parliament.

Nature for All is equipping **LINK** members with the knowledge and skills to be more inclusive, bringing a diversity of voices into our sector to be able to speak up for Scotland's environment.

What does **LINK** do?

LINK facilitates change: we build collaboration, support and enable partnership working to add value for the environment through leadership and engagement.

As the voice for Scotland's environment, the **LINK** network exists to support our members in making change happen on the ground for a healthier environment, healthier societies and a healthy planet.

Our members work together under the themes of land, sea and society, advocating for policy change and designing and delivering campaigns and initiatives. These bring more voices together in calling for the protection and restoration of Scotland's amazing environment on land and at sea.

The voice for
Scotland's environment

Strategy 2024— 2030

Our land is home to ecologically coherent and inspiring landscapes, where nature thrives as part of productive sustainable land use.
SDG11, SDG15

Our society thrives with equal rights for communities; access to a healthy, safe environment and is based on a circular economy.
SDG12

Our seas are home to ecologically productive habitats and wild seascapes with sustainable fish and marine stocks and flourishing coastal communities
SDG14

What is LINK for?

We are living in unprecedented times...

Our daily lives in Scotland are now regularly disrupted by weather events caused by climate change and our quality of life is impacted by the decline in nature.

We are not caring for our habitats and species. We need them: they provide clean air and water, healthy food and soils, flood and landslide prevention and the wellbeing we all derive from being in nature.

Our nation's wellbeing is fundamentally based on a healthy environment, where nature and people thrive.

LINK's strategic plan to 2030 identifies what LINK will do in response to today's climate and nature emergency and how we will support the transformative changes required in Scotland and beyond.

We cannot do this alone and we will continue to work with others to maximise everyone's voice for the environment so that together we will leave a legacy of a healthy, diverse and nature rich future.

MISSION

LINK supports our members to work together on agreed priorities, in order to effect environmental policy change in Scotland. We build partnerships that create irresistible momentum towards change.
